

## **CLAIMS**

Please cancel claims 10, 18, and 23 (first occurrence) without prejudice or disclaimer, and please amend claims as shown in the following claim listing.

1. (Currently amended) A method of delivering power comprising:
  - using a battery charging circuit to transfer power from a source device in a network to a first receiving device in the network; and
  - using the battery charging circuit to transfer power from the source device to a second receiving device in the network, the first and second receiving devices being different types of devices,  
wherein using the battery charging circuit to transfer power includes transferring power through an inductive coupling charge transmitter to the receiving devices.
2. (Currently amended) The method of claim 1, wherein using the battery charging circuit to transfer power from the source device includes transferring power from ~~at least one of a~~ computer system and/or a personal digital assistant.
3. (Original) The method of claim 2, wherein transferring power from the computer system includes transferring power from a laptop computer.
4. (Original) The method of claim 2, wherein transferring power from the computer system includes transferring power from a desktop computer.
5. (Currently amended) The method of claim 1, wherein using the battery charging circuit to transfer power to the first receiving device includes transferring power to a personal digital assistant and using the battery charging circuit to transfer power to the second receiving device includes transferring power to ~~at least one of a~~ digital camera, a wireless phone and/or a wireless headset.

6. (Currently amended) The method of claim 1, wherein using the battery charging circuit to transfer power to the first receiving device includes transferring power to a digital camera and using the battery charging circuit to transfer power to the second receiving device includes transferring power to ~~at least one of~~ a personal digital assistant, a wireless phone and or a wireless headset.

7. (Currently amended) The method of claim 1, wherein using the battery charging circuit to transfer power to the first receiving device includes transferring power to a wireless phone and using the battery charging circuit to transfer power to the second receiving device includes transferring power to ~~at least one of~~ a personal digital assistant, a digital camera and or a wireless headset.

8. (Currently amended) The method of claim 1, wherein using the battery charging circuit to transfer power to the first receiving device includes transferring power to a wireless headset and using the battery charging circuit to transfer power to the second receiving device includes transferring power to ~~at least one of~~ a personal digital assistant, a digital camera and or a wireless phone.

9. (Currently amended) The method of claim 1, ~~wherein including~~ using the battery charging circuit to transfer power ~~includes transferring power~~ through a universal serial bus cable to ~~the~~ a receiving ~~device~~device.

10. (Canceled).

11. (Currently amended) The method of claim 1, ~~further including:~~  
determining an amount of available power in the source device;  
determining an amount of needed power in the first receiving ~~device~~device; and

determining an amount of power to transfer based on the available power and the needed power.

12. (Original) The method of claim 11, further including determining that the amount of needed power exceeds the amount of available power.

13. (Currently amended) The method of claim 12, wherein determining the amount of power to transfer includes ~~at least one of~~ denying power transfer, transferring a fraction of the amount of needed power, and/or negotiating the amount of power to transfer with the first receiving device.

14. (Original) The method of claim 1, further including using the battery charging circuit to transfer data from the source device to at least one of the receiving devices.

15. (Currently amended) A battery charging circuit comprising:

a power delivery module; and  
a charge transfer interface operatively coupled to the power delivery module, the power delivery module to transfer power from a power supply through the charge transfer interface to different types of receiving devices,

wherein the charge transfer interface includes an inductive coupling charge transmitter.

16. (Currently amended) The battery charging circuit of claim 15, wherein the receiving devices are to include at least two of a personal digital assistant, a digital camera, a wireless phone, a media player and/or a wireless headset.

17. (Currently amended) The battery charging circuit of claim 15, wherein the charge transfer interface includes a universal serial bus cablinterface.

18. (Canceled).

19. (Currently amended) The battery charging circuit of claim 15, wherein the power delivery module is to determine an amount of power available from the power supply, determine an amount of power needed in ~~the~~a receiving ~~devices~~device and determine an amount of power to transfer based on the power available and the power needed.

20. (Currently amended) A computer system comprising:  
a power supply;  
a power delivery module; and  
a charge transfer interface coupled to the power delivery module and the power supply, the power delivery module to transfer power from the power supply through the charge transfer interface to different types of receiving devices,  
wherein the charge transfer interface includes an inductive coupling charge transmitter.

21. (Currently amended) The computer system of claim 20, wherein the receiving devices are to include at least two of a personal digital assistant, a digital camera, a wireless phone, a media player and/or a wireless headset.

22. (Currently amended) The computer system of claim 20, wherein the charge transfer interface includes a universal serial bus ~~ea~~bleinterface.

23. (Canceled).

~~23~~24. (Currently amended) The computer system of claim 20, wherein the computer system is to transfer data through the charge transfer interface to at least one of the receiving devices.

25. (Currently amended) The computer system of claim 20, wherein the power delivery module is to determine an amount of power available in the power supply, determine an amount

of power needed in ~~the~~a receiving ~~device~~device and determine an amount of power to transfer based on the power available and the power needed.

26. (Original) The computer system of claim 20, wherein the power supply includes an alternating current (AC) adapter.
27. (Original) The computer system of claim 20, wherein the power supply includes a direct current (DC) power source.
28. (Original) The computer system of claim 27, wherein the DC power source includes a fuel cell.
29. (Currently amended) A laptop computer comprising:
  - a lid;
  - a power supply;
  - a power delivery module; and
  - an inductive coupling charge transmitter ~~operatively~~ coupled to the lid, the power delivery module and the power supply, the power delivery module to transfer power from the power supply through the inductive coupling charge transmitter to different types of receiving devices, the receiving devices to include at least two of a personal digital assistant, a digital camera, a wireless phone, a media player and/or a wireless headset, the power delivery module to determine an amount of power available in the power supply, determine an amount of power needed in ~~the~~a receiving ~~device~~device and determine an amount of power to transfer based on the power available and the power needed.
30. (Currently amended) The laptop computer system of claim 29, wherein the power supply includes an alternating current (AC) adapter.

31. (Currently amended) The laptop computer system of claim 29, wherein the power supply includes a direct current (DC) power source.

32. (Currently amended) The laptop computer system of claim 31, wherein the DC power source includes a fuel cell.
